Why Choose Woodline Parquetry

Woodline Parquetry floors aren't just designed to impress. Our hardwood flooring is engineered for living – good looking, hard wearing and simple to maintain. What's not to love?

Huge range of wood, colours and finishes

Our extensive range of wood options, colours and finishes across eight unique collections means you have more than one thousand different options to choose from.

A long-term investment that adds value

You will get to enjoy your Woodline Parquetry floor twice over. Firstly, during home ownership and then all over again when it's time to sell. With the majority of homebuyers dreaming of a wood floor our engineered flooring is an investment that adds long-term value and ticks the "must have" box for prospective purchasers.

Long lasting

Our low maintenance hardwood floors feature a scratch resistant coating and have been engineered to withstand everyday living. Follow our simple maintenance instructions and your floor will last a lifetime!

Perfect fit and finish

Woodline Parquetry intelligent engineering means that once installed our flooring will sense and acclimatise to its surrounding environment and create the perfect fit. Because our product is handcrafted with rigorous quality control we guarantee consistency of finish – none of the gaps, bowing, uneven edges or height differences between boards that you get with traditional timber.

Splash proof and easy to clean

All you need is a vacuum, broom and a mop. Seriously. It's that simple. However, if over time, the sheen on the floor diminishes due to natural wear and tear from foot traffic, it is easily revitalised using recommended products.

Reduces allergens in the home

Intelligent engineering also means a seamless finish which contributes to a healthier home environment. Unlike timber floors our flooring won't trap dirt or harbour dust mites and allergens.

Easy to install

Designed to be quick and easy to install you'll be walking on your Woodline Parquetry floor within 24 hours. No unpleasant chemical smell, no mess, no time-consuming lacquer or days waiting for varnish to dry that comes with the installation of traditional flooring.

Planet friendly

Last but certainly not least, our engineered hardwood floors are environmentally friendly. Our wood is responsibly sourced and certified. It may surprise you to know that we use timber more efficiently, and with less impact on the environment than a traditional timber floor. That's called planet friendly peace of mind!

Engineered Hardwood Explained

As opposed to a traditional solid timber floor, our engineered hardwood flooring utilises cutting-edge technology to create a great looking, multi-layered, low maintenance floor that will last a lifetime.

The top layer of a Woodline Parquetry floor is made from a species of your choice with a huge selection of colours and finishes to choose from. Our Collections include carefully selected, legally harvested wood from Western Europe, Australia, South East Asia and Brazil. Once sourced, this wood is hand graded for quality, tone, pattern and form. The next step in the process is surface treatment with a tough protective anti-scratch coating to ensure optimum durability.

In the centre of our floor is Woodline Parquetry's scientifically developed Hevea Core which is constructed from a tree known for its strength, Hevea Brasiliensis. Our core technology uses multiple staves of Hevea in a scientifically formulated pattern to create a highly stable core that is less likely to expand, contract or move when exposed to moisture, humidity and temperature. This is the key to ensuring our engineered wood flooring out performs all other construction formats, lasts a lifetime and makes a great option for every room in the house.

The final foundation layer acts as a balancing agent and contributes to the durability and stability of the floor. We source the medium density hardwood needed for the base from renewable plantations in Indonesia.

Benefits of Hevea Core

Hevea Brasiliensis is a plantation hardwood timber that shares the same high density and strength as White Oak which is native to the US. It is therefore an excellent, environmentally sound substitute for Oak and other slow growing hardwood species.

We use Hevea Brasiliensis to create the core of our flooring because it provides greater dimensional stability and can withstand external pressure (such as temperature, moisture and air) to change. This ensures that the all-important core in our multi-layer engineered floors is stronger and more reliable than other species which are found in cheaper products.

Hevea Brasiliensis

Hevea - At the heart of our floors

- Hevea brasiliensis is a plantation hardwood timber known for its density and durability.
- Using Hevea to create our specially formulated core ensures our engineered flooring is strong, stable and durable.
- Hevea is a renewable plantation hardwood species so it's also planet friendly.

Core Structure

Scientifically formulated floors engineered for living

- Intelligent engineering within the Hevea core means once installed our flooring will sense and acclimatise to its surrounding environment to create the perfect fit.
- The scientifically formulated Hevea core ensures our floors can withstand external pressure to change. Our floors are less likely than traditional timber flooring to expand, contract or move when exposed to moisture, humidity or temperature extremes.
- Incorporating a Hevea core enables us to provide the dimensional stability needed to make the beautiful 400mm wide planks favoured by interior designers and homeowners worldwide.
- No unpleasant surprises! Our wood is treated with a natural mineral pesticide that is safe for family and pets to eliminate fungi and borer pests.

Composition

The whole is greater than the sum of its parts

From foundation to precious hardwood surface each individual layer of our engineered flooring is est in-class. Together the result is unparalleled.

- From Oak to Ash, Maple to Merbau and Walnut to Webge we gave a huge range of sustainable sourced, stunning hardwood to choose from.
- We only products and, quality products and unlike other flooring suppliers, we do not use veneers.

The floor that combines the best

1. Top coat

Our finishes include a large range of colours and stains which are protected with premium top coats of either 7 layers of scratch resistant UV urethane or 3 layers of UV oil.

2. Hardwood Surface

- Our wide choice of beautiful hardwood is available in surface thickness of either 3.2 or 6mm.
- Our hand-crafted surface treatments and textures combine artisanal detail with the latest technology to create a floor that is unique to your home.

3. Core layer

At the heart of every floor is our specially formulated pattern of Hevea hardwood which gives our flooring its core strength and stability.

4. Foundation layer

The final timber foundation gives additional stability and durability to the floor.
